Oscrete 179 is a fine off-white free flowing powder blend based upon selected long chain fatty acids and inert pore fillers. Oscrete 179 has been specifically formulated for wet and semi-dry processes where it is readily dispersed in the mix to impart water resistance properties to the concrete. In addition to its excellent water absorption reducing properties, it also helps to control efflorescence problems by limiting moisture migration within the concrete pores.

Oscrete 179 when used within the limits of recommended dosing has no effect on the rate of setting or the strength of the concrete.

Applications

Oscrete 179 is suitable for wet and some semi-dry mixes in the manufacture of paving stones, walling blocks, reconstructed stone and decorative products. Oscrete 179 will not affect production times in the manufacture of pressed products.

Benefits in Concrete

- Easily dispersed
- Controlled efflorescence
- Neutral set
- Reduced water absorption

Addition Rates

Dosage rates will be dependant on mix design, process, types of aggregates and the desired effect but typically:

500gms - 1000gms per 100 kg cement
(0.50% - 1.00% by weight of cement)

Standards

Oscrete 179 is produced in accordance with the ISO 9001 Quality Management Standard and the ISO 14001 Environmental Management Standard.
Compatibility

_Oscrete 179_ is compatible with all Portland cement systems, including GGBS, Pfa and limestone blends. _Oscrete 179_ is compatible with all Oscrete admixtures, but should be added to the mix separately.

Storage

Store the product in a dry environment at temperatures between 10 and 30 degrees centigrade. Moisture ingress will cause the product to harden.

Handling

_Oscrete 179_ is a non hazardous product but in line with normal handling procedures, protective gloves and goggles should be worn to avoid contact with skin and eyes.

Refer to the Material Safety Data Sheet for full details.

Packaging

_Oscrete 179_ is supplied in 25kg bags, 1000kg per pallet shrink wrapped.

Notes

_Oscrete 179_ should be added with the water or at the end of the mixing process and not directly onto the cement. A mixing time of at least 30 seconds is recommended after the addition of the admixture.

_Oscrete 179_ water repellent may increase the air content of wet concrete.

Please consult the OSCRETE Technical Department for advice on admixture selection.
